Total No. of (name) \_\_\_\_\_ Tablets taken in week:

**No. of Tablets**= how many do you take at a time. If you take different types, keep a note of this also  
**Event** = Did something in particular happen before you took the tablets at that particular time? Are there any events that seem to trigger your usage?

**Feeling** before / after = Try to be as specific as you can about this. You could try rating the difference ( if any) eg on a scale of stress, where 1 is least stressed and 10 is most stressed

On reviewing your diary, what would the easiest times to reduce your usage? E.g. if you notice that you only *sometimes* take the tablet(s) in the afternoon, then that might be the easiest place to start.

Can you think of helpful alternative activities for yourself?
